Endorsement Relevance Assessment System(ERAS)

Before you begin using it, please follow the instructions below to set up the necessary data in your environment. This will ensure a smooth optimal functionality of the API.

Step 1: Download the Data Script

First, download the provided data script attached to this . This script contains SQL commands to insert essential data into your database.

Step 2: Execute the Data Script

Using a database management tool MySQL Workbench, execute the data script against your database. This will populate the required tables with sample data necessary for API operations.

Step 3: Verify Data

Once the script has been executed successfully, verify that the data has been inserted into the following tables:

company_entity

skill_entity

user_entity

user_skill_mapping

user_company_mapping
